

APATable

My first heading

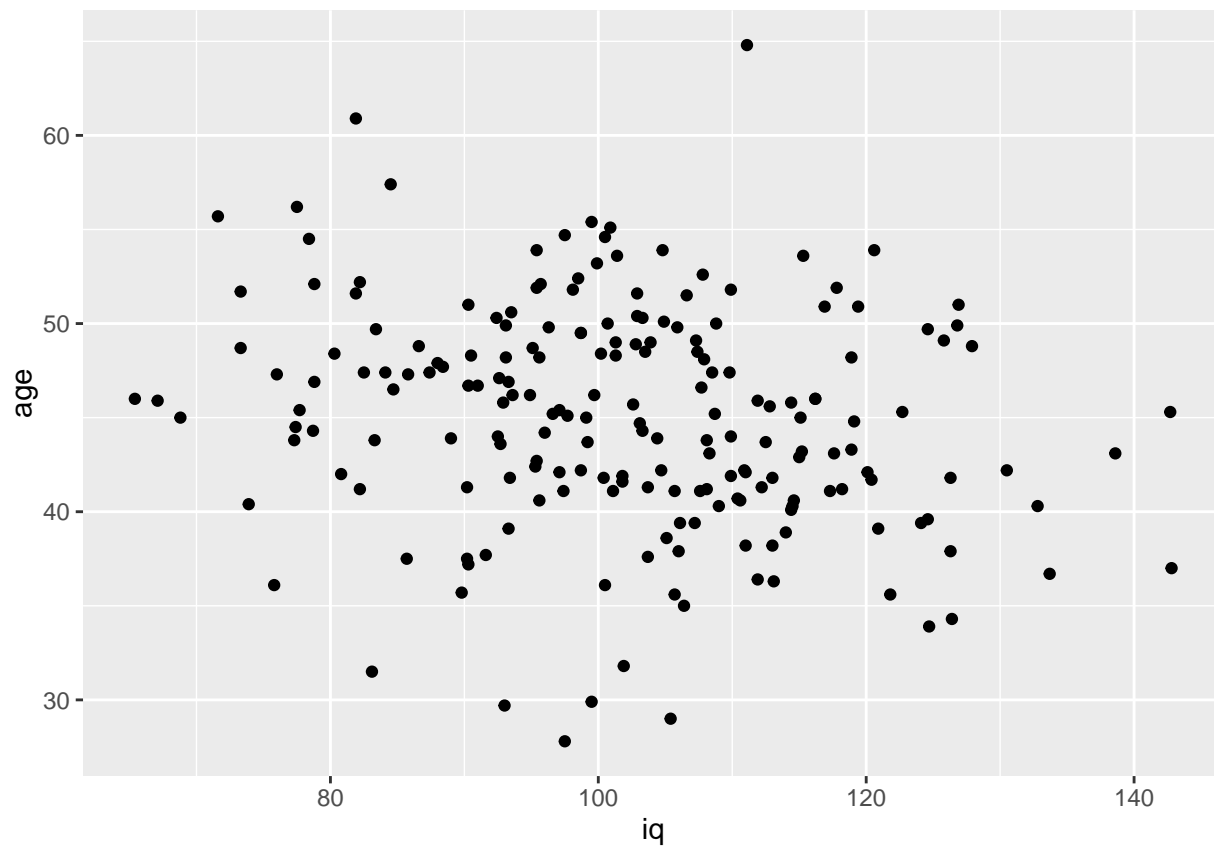

```
library(tidyverse)
my.data <- read_csv("regLectureData.csv")
my.reg <- lm(VidScore ~ age + iq, data=my.data)

library(apaTables)
x <- apa.reg.table(my.reg, filename="my_reg_table.doc")

psych::pairs.panels(my.data)
```

```
my_graph <- qplot(iq,age,data=my.data)
print(my_graph)
```

```
iq_mean <- round(mean(my.data$iq), 2)
```

The mean IQ in my sample was $M = 102$
